

## Main elements in a typical dashboard

The dashboard displays a table with columns for years (2003-2011) and rows for various categories (Annex, BAL, BOB, CEL1, CEL2, DS, FDFBAL, FDFBIA, FDFPIC, IA, IB, IC, IWE). Callouts point to the 'Filtering' menu on the right, the table data itself, the 'Measures values' column, the 'Dimensions' and 'Time' headers, and the 'Downloading' button at the bottom.

## To see disaggregated data

A callout points to a '+' sign in the year header (2000) of the table, with the text: "After moving the mouse over the dimensions or time headings click on the '+' sign".

Note that by expanding the hierarchy an increasing amount of time will be required for the visualization of the table in your browser. Use wisely and in combination with filters on the right to reduce the amount of time. If you are interested in downloading the entire underlying data set rather than exploring online please use the download data function.

## To filter data

The filter panel shows 'Measure Names' with 'Nominal effort (KW-days)' selected. Under 'Annex', several options are checked: (All), BAL, BOB, CEL1, CEL2, DS, FDFBAL, and FDFBIA. A callout points to these options with the text: "Select measures and filter data according to dimension values".

## To download data

The dialog box shows options for 'Image', 'Data', 'Crosstab', and 'PDF'. A callout points to the 'Crosstab' and 'Data' options with the text: "Select 'Crosstab' to download what you see into a csv file. Select 'Data' -> 'Underlying' -> 'Show all columns' to download the entire data set".
